

4. Write a program in Java to demonstrate try and catch

```
package OnlinePractice2;

public class Try_Catch {

    public static void main(String[] args)
    {

        int a = 10, b = 5, c = 5, result;

        try {

            result = a / (b - c);

            System.out.println("result" + result);

        }

        catch (ArithmeticException ae) {

            System.out.println("Exception :Division by zero");

        }

    }

}
```
